

Honorable Peter DeFazio, Congressman
United States House of Representatives
Chair, House Committee on Transportation and Infrastructure
405 East 8th Ave. #2030
Eugene, OR 97401

July 20, 2021

Subject: Infrastructure Plan Provision for Housing for the Electrically Disabled

Dear Mr. DeFazio,

We write you today to tell you that the electrically disabled population needs a provision for housing in the Infrastructure plan. An emergency exists for many Americans. People with microwave radiation sickness (electromagnetic hypersensitivity – EHS¹) disability are in crisis due to the 5G roll-out² – we cannot tolerate the dense radiation³ and need housing and safety. About 2% of the population has severe EHS and 35% has “moderate symptoms represented by an impaired immune system and by chronic illness.”⁴ Some people are so affected by electromagnetic radiation (EMR) that exposure is life-threatening. We cannot sleep, think or function during or after exposure, are injured and made ill.

The housing crisis for electrosensitives has been a problem since digital wireless radiation emerged in 1996, and with 5G the crisis has become even more dire. The radiation from Fifth Generation wireless/Internet of Things (5G/IoT) represents an exponential densification in toxic radiation and no one in Congress has even looked at its impact on the climate crisis or other worldwide health and environmental issues before steam-rolling ahead. 5G will consume 1000 times more energy than current wireless technology.⁵ The National Institute of Building Sciences (NIBS) recognizes electro-sensitivity⁶ as does the Access Board,⁷ Job Accommodation Network (JAN), states, doctors and judges. The Fair Housing Act was supposed to prevent housing discrimination on the basis of disability, and the Rehabilitation Act and Americans with Disabilities Act are supposed to protect the disabled from discrimination and assure access. But we are electrocuted, injured⁸ and denied entry to every area of society. Agencies of the Government have ignored our disability, denied its existence,⁹ and made policy not to address it.¹⁰ The National Institutes of Health (NIH) has

shown wireless radiation causes deleterious, astonishingly horrific effects (cancer, DNA damage lower birth weights), not just from holding a device to the head but from less dense, whole-body radiation exposure.¹¹ Wildlife has been decimated – birds,¹² bees, and other species have declined at an appalling rate.¹³ Electrical Hypersensitivity would hardly exist were it not for digital wireless, but now, children,¹⁴ teens, and young adults¹⁵ have contracted this life-destroying disease – a disgraceful situation.

Thousands of us have been made homeless,¹⁶ lost livelihoods, health, and some even their lives.¹⁷ We cannot see our friends and family, go to court, the hospital, the library, or community gatherings. We cannot do simple things like go to a restaurant or a park because of wireless infrastructure. We pay taxes, but they are passed on to the wireless industry in the form of subsidies via legislation, which fund projects that physically harm us while taking away our civil and human rights. “Broadband” does not mean wireless, but most people think it does so the provision in the Infrastructure plan means a few very large companies will profit enormously while we lose everything. Wireless is invisible so companies have gotten away with savagery and harming the public and all life forms down to the DNA level for decades. If people could see microwave radiation they would not stand for this out of control proliferation – they would know about its environmental impacts and demand a safer communication system.¹⁸

“Autonomous vehicles (AVs)” are another way 5G will preclude electro-sensitives from access – to highways, roads, sidewalks and storefronts.¹⁹ AVs are not green – they use genotoxic, neurotoxic, carcinogenic²⁰ radar,²¹ microwave and millimeter wave radiation.

At the very least we must have a place reserved without wireless that has available and affordable housing. **We need a section in the trillion dollar Infrastructure bill for housing for this under-served segment of the population.**²²

We will follow up with your office to discuss possibilities to resolve this housing crisis, can provide people to testify, and can to present to you and your staff a power point to further educate you on this matter of life and death. Thank you for your attention and help regarding this extreme crisis of the wireless disabled.

Sincerely,
Eva Bortnick,
The People's Initiative, Oregon Chapter

Letter Endorsed by:
Families for Safe Technology, Eugene, Oregon

AVs will prohibit electrically disabled people from access to roads and sidewalks.²³

The map below shows the radiation from 4G base stations as compared to the predicted 5G radiation in Austin, Texas.

- 22 **2. Quality of life at home: \$650 billion** The largest part of the plan focuses on American homes, school buildings, underground water infrastructure and broadband expansion. The plan would spend \$213 billion to build, preserve and retrofit more than 2 million affordable homes and commercial buildings. This includes the construction or rehabilitation of 500,000 homes for low- and middle income owners. An additional \$111 billion would go toward clean drinking water, including replacement of all lead pipes and service lines. The plan sets aside \$100 billion for constructing or modernizing public schools, while another \$100 billion would be used to build high-speed broadband networks throughout the country. The goal would be for broadband to become universal for all Americans and to drive down the costs for internet. The plan also calls for \$40 billion to improve public housing, \$18 million for Veterans Affairs hospitals and clinics, \$12 billion for community college infrastructure and \$16 million to plug oil and gas wells and reclaim abandoned mines.
